## Chapter 2

# DESCRIPTION

Function returns type information from given buffer pointer in *ptr*. If paramter *type* is not NULL, then in case of success buffer type is coppied to. If buffer sub-type is used and argument *subtype* is not NULL, then sub-type code is coppied to.

## Chapter 3

# RETURN VALUE

On success, **tptypes()** return buffer allocated length; on error, -1 is returned, with **tperrno** set to indicate the error.

## Chapter 4

# ERRORS

Note that **tpstrerror()** returns generic error message plus custom message with debug info from last function call.

**TPEINVAL** Enduro/X is not configured or buffer pointer is NULL or not allocated by **tpalloc()**.

**TPESYSTEM** System failure occurred during serving. See logs i.e. user log, or debugs for more info.

**TPEOS** System failure occurred during serving. See logs i.e. user log, or debugs for more info.
