Chapter 1

SYNOPSIS

```
#include <atmi.h>
```

```
#define tpurcode (*_exget_tpurcode_addr())
```

For XATMI client link with *-latmiclt -latmi -lubf -lnstd -lpthread -lrt -lm*

For XATMI server link with *-latmisrvl -latmisrvnomainl -latmisrvinteg -latmi -lubf -lnstd -lpthread -lrt -lm*

Chapter 2

DESCRIPTION

Macro returns the *r*code value which is returned by XATMI server. The value is saved in global variable after **tpcall(3)** performed. The *r*code is available (i.e. reset to new value) only if server processes did generate the response. I.e. in case of **TPENOENT** error, the tpurcode() will return previous value.

Chapter 3
