Chapter 2

DESCRIPTION

Function registers callback function which is activated when XATMI server's main loop is going to poll for next message. The *p_b4pollcb* callback function in case of success shall return 0. If *p_b4pollcb* returns other value than 0, then XATMI server proceeds with shutdown.

This function is available only for XATMI servers.

Chapter 3

RETURN VALUE

On success, **tpext_addb4pollcb()** return zero; on error, -1 is returned, with **tperrno** set to indicate the error.

Chapter 4

ERRORS

Note that **tpstrerror()** returns generic error message plus custom message with debug info from last function call.

TPEINVAL *p_b4pollcb* paramter is NULL.

Chapter 5

EXAMPLE

See `atmitest/test008_extensions/atmisv.c` for sample code.
