# Chapter 1

# SYNOPSIS

#include <ubf.h>

BFLDID Bfldid (char *fldnm*);

Link with *-lubf -lnstd -lm -lpthread*

# Chapter 2

# DESCRIPTION

Get field id by field name passed in *fldnm* parameter. Note that field must be defined in field tables (**fd** files) (see ex_env(5), variables **FIELDTBLS**, **FLDTBLDIR**).

# Chapter 3

# RETURN VALUE

On success, **Bfldid()** returns compiled file id; on error, **BBADFLDID** is returned.

# Chapter 4

# ERRORS

No errors are returned by this function.

# Chapter 5

# EXAMPLE

See **ubftest/ubfunit1.c** for sample code.

# Chapter 6

# BUGS

Report bugs to support@mavimax.com
