Chapter 1

SYNOPSIS

#include <ubf.h>

char * Bfname (BFLDID *bfldid*);

Link with *-lubf -lnstd -lm -lpthread*

Chapter 2

DESCRIPTION

Return the field name loaded for given compiled field id *bfldid*. Field id is compiled by **mkfldhdr(8)**.

Chapter 3

RETURN VALUE

On success, **Bfname**() returns field name in thread local storage stored char array. If field is unknown to the system, function returns NULL and the error is set.

Chapter 4

ERRORS

In case of error **Berror** will be non **0**. Note that **Bstrerror**() returns generic error message plus custom message with debug info from last function call.

BBADFLD field not found in field tables.

Chapter 5

EXAMPLE

See **ubftest/ubfunit1.c** for sample code.

Chapter 6

BUGS

Report bugs to support@mavimax.com
