Chapter 1

SYNOPSIS

#include <ubf.h>

int Bflddbdrop(EDB_txn *txn);

Link with *-lubf -lnstd -lm -lpthread*

Chapter 2

DESCRIPTION

Drop the LMDB UFB custom field databases. Note that if parameters in configuration are changed (like map size or max readers), after this call these parameters are not re-applied. The drop is done as part of the LMDB transaction, passed in the *txn* variable. The transaction is open by edb_txn_begin() and finished by edb_txn_commit() or edb_txn_abort().

Chapter 3

RETURN VALUE

On success, **Bflddbunlink**() return zero; on error, -1 is returned, with **Berror** set to indicate the error.

Chapter 4

ERRORS

In case of error **Berror** will be non **0**. Note that **Bstrerror**() returns generic error message plus custom message with debug info from last function call.

BEINVAL database is not loaded.

BNOSPACE LMDB error - no space, see logs.

BEUNIX LMDB error, see logs.

Chapter 5

EXAMPLE

See **atmitest/test050_ubfdb/atmiclt50.c** for sample code.

Chapter 6

BUGS

Report bugs to support@mavimax.com
