Chapter 1

SYNOPSIS

```
#include <ubf.h>
```

```
int Bflddbdrop(EDB_txn *txn);
```

Link with *-lubf -lnstd -lm -lpthread*

Chapter 2

DESCRIPTION

Drop the LMDB UFB custom field databases. Note that if parameters in configuration are changed (like map size or max readers), after this call these parameters are not re-applied. The drop is done as part of the LMDB transaction, passed in the *txn* variable. The transaction is open by `edb_txn_begin()` and finished by `edb_txn_commit()` or `edb_txn_abort()`.

Chapter 3

RETURN VALUE

On success, **Bfddbunlink()** return zero; on error, -1 is returned, with **Berror** set to indicate the error.

Chapter 4

ERRORS

In case of error **Berror** will be non **0**. Note that **Bsterror()** returns generic error message plus custom message with debug info from last function call.

BEINVAL database is not loaded.

BNOSPACE LMDB error - no space, see logs.

BEUNIX LMDB error, see logs.

Chapter 5

EXAMPLE

See `atmitest/test050_ubfdb/atmict50.c` for sample code.

Chapter 6

BUGS

Report bugs to support@mavimax.com
