Chapter 1

SYNOPSIS

mkfldhdr [-D dbglev, legacy] [-d target directory] [field table . . .]

Chapter 2

DESCRIPTION

Program generates C header files from field table declaration tables. Field tables are declared as macros which later are translated into C header files. Field tables also are used in runtime in boolean expressions and also in dumping the buffer.

There is special syntax within field tables.

- Lines to be sent to C Header are declared as: *$*

- The base number is declared as **base NUMBER*. The number is logical field offset.

- Empty lines are ignored.

- *#* Is comment, which is ignored.

- All other are treated as field name in start of the line.

- Syntax for field definition is following: "FIELD_NAME ID TYPE OCC DESCRIPTION" where

  FIELD_NAME
      Is field UBF field name.

  ID
      Is relative field it within **base*. **base*+field ID must be bellow *NDRX_UBFMAXFLDS* number defined in environment. Max number is 33554432 (25 bit).

  OCC
      Occurrences, 1 - single field. M - maybe be multiple fields.

  DESCRIPTION
      Field description.

Example input (testws.fd file):

```
$/**
$ * Web service test ud file.
$ *
$ * @file       testws.fd
$ * @copyright  Mavimax, ltd
$ * @version    SVN: $Id$
$ */

$#ifndef __TEST_FD
$#define __TEST_FD

*base 1000

T_STATCODE      0       long            1 Test field...
```

```
T_STATMSG       1       string          1 Test field...
T_ITEMSTOT      2       long            1 Test field...
T_AMTSTRTOT     3       string          1 Test field...
T_PAGESTOT      4       long            1 Test field...
T_SHORT         5       short           1 Test field...
T_CHAR          6       char            1 Test field...
T_FLOAT         7       float           1 Test field...
T_DOUBLE        8       double          1 Test field...
T_STRING        9       string          1 Test field...
T_USERNAME      10      string          1 Test field...
T_PAGENUM       11      long            1 Test field...
T_ITEMSPP       12      long            1 Test field...

T_SOMEDATE      13      long            1 Test field...
T_SRCHDATE      14      long            1 Test field...
T_SRCHPRM1      15      string          1 Test field...
T_SRCHPRM2      16      string          1 Test field...
T_MYFIELDS      17      string          1 Test field...
SRVCNM          18      string          1 Service name to call
T_CONSTFIELD    19      string          1 This is constant.
T_MYLONGFLDS    20      long            1 Long array test

$#endif
```

Example output after utility run (testws.fd.h):

```
/**
 * Web service test ud file.
 *
 * @file       testws.fd
 * @copyright  Mavimax, ltd
 * @version    SVN: $Id$
 */

```

Chapter 3

ENVIRONMENT

FIELDTBLS
   Comma separated list of field table file names.

FLDTBLDIR
   Colon separated list of directories where field tables are located.

Chapter 4

OPTIONS

-D *DEBUG_LEVEL*
    Not used. Left for capability with Tuxedo.

-d *OUTPUT_DIR*
    Directory where to dump the generated header files.

-m *LANGUAGE_MODE*
    Language mode. Value *0* (default) for C language header. *1* for GO language constants file. *2* for Java constant classes.

-p *LANG_PRIVATE_DATA*
    Private data for language module. For GO and Java languages it is used for package name.

Chapter 5

EXIT STATUS

0
    Success

NON_ZERO
    Failure
