Chapter 1

SYNOPSIS

cpmrsv [*OPTIONS*]

Chapter 2

DESCRIPTION

Client process monitor is Enduro/X server process which is responsible for managing client processes, which are described in *ndrxconfig.xml*, *<clients>* section. The process reloads configuration file every time when timestamp is changed. If process is removed from *<clients>* section and process is stopped, then it is removed from listings. If process is running, it is left in current process model.

cpmsrv is servicing backend functionality for xadmin's pc (print clients), bc (boot client), sc (stop client) commands. Invoked via ATMI subsystem resources.

During the startup phase, all *autostart* processes are started. During the shutdown phase all started processes are shut-down, by doing standard kill signalling.

If using wildcards in bc/sc/rc commands, then please ensure that estimated start/stop times are shorter than **cpmsrv** max ping time (if enabled in *ndrxconfig.xml*). Otherwise the **cpmsrv** might be killed by **ndrxd** because it will assume that **cpmsrv** is not responding.

Chapter 3

OPTIONS

-i *CHK_INTERVAL*

CHK_INTERVAL process checking interval in seconds. Default 15.

-k *KILL_INTERVAL*

KILL_INTERVAL process kill interval (wait seconds between -2, -15, -9 signals). Default 30.
