Chapter 1

SYNOPSIS

```
#include <ubf.h>
int Bvnull(char *cstruct, char *cname, BFLDOCC occ, char *view);
```

Chapter 2

DESCRIPTION

Test is field in structure `NULL`. The tests are done by comparing the field value with `NULL` value column defined in view file. Note that if `NULL` was set to **NONE**, then function will always return **FALSE**. The pointer to structure is given in `cstruct`. The field name is specified in `cname`. The array element index (zero based) is passed in `occ` field. If `COUNT` is set to 1 in view file, then field is tested via `occ` set to **0**.

Chapter 3

RETURN VALUE

If field is NULL, **Bvftos()** return **1**; If field is no NULL, function returns **0**; on error, -1 is returned, with **Berror** set to indicate the error.

Chapter 4

ERRORS

Note that **Bstrerror()** returns generic error message plus custom message with debug info from last function call.

BEINVAL Invalid value passed to function, parameters are NULL or invalid *occ* index.

BNOCNAME Invalid *cname* specified (field not found).

BBADVIEW View is not found, object file is defective or system error.

Chapter 5

EXAMPLE

See **atmitest/test040_typedview/viewunit1.c** for sample code.

Chapter 6

BUGS
