Chapter 1

SYNOPSIS

```
#include <atmi.h>
```

```
int tpsrvsetctxdata (char *data, long flags);
```

Chapter 2

DESCRIPTION

Restore context data from previously saved (**tpsrvgetctxdata()**) context data. The *data* field is value returned by **tpsrvgetctxdata()**. This function is needed for multi threaded server, in order to restore tpcall() data in worker thread. If global transaction was running in main thread for which **tpsrvgetctxdata()** was called, then **tpsrvsetctxdata()** will resume the global transaction in current thread.

This function is available only for XATMI servers.

Valid flags

TPNOAUTBUF Do not restore auto buffer when restoring the server context. This can be suitable in case if buffer is already made free by initial service thread and the target server/service does not know anything about given pointer. E.g. the context is copied to different process.

Chapter 3

RETURN VALUE

On success, **tpsrvsetctxdata()** return pointer to context data block; on error, NULL is returned, with **tperrno** set to indicate the error.

Chapter 4

ERRORS

Note that **tpstrerror()** returns generic error message plus custom message with debug info from last function call.

TPEINVAL *data* is NULL.

TPEPROTO Global transaction is already started.

TPESYSTEM System failure occurred during serving. See logs i.e. user log, or debugs for more info. Could be the case if XA sub-system is not open by **tpopen()**.

TPEOS System failure occurred during serving. See logs i.e. user log, or debugs for more info.

Chapter 5

EXAMPLE

See `atmitest/test017_srvthread/atmisv17.c` for sample code.

Chapter 6
