## Chapter 1

# SYNOPSIS

`#include <ubf.h>`

`int Bread (UBFH *p_ub, FILE *inf);`

Link with `-lubf -lnstd -lm -lpthread`

## Chapter 2

# DESCRIPTION

**Bread()** function reads the buffer from input stream (*inf*). Buffer is restored into *p\_ub*. The used/free space is updated accordingly. The buffer format is in machine architecture dependent (LSB/MSB, integer size). The *p\_fb* shall have enough space allocated before this function call.

## Chapter 3

# RETURN VALUE

On success, **Bread()** return zero; on error, -1 is returned, with **Berror** set to indicate the error.

## Chapter 4

# ERRORS

Note that **Bsterror()** returns generic error message plus custom message with debug info from last function call.

**BALIGNERR** Corrupted buffer or pointing to not aligned memory area.

**BNOTFLD** Buffer not fielded, not correctly allocated or corrupted.

**BEINVAL** *inf* is NULL.

**BEUNIX** Failed to read from stream.

---

## Chapter 5

# EXAMPLE

See `ubftest/test_readwrite.c` for sample code.

## Chapter 6

# BUGS

Report bugs to [support@mavimax.com](mailto:support@mavimax.com)
