# DESCRIPTION

Remove request logging file name from UBF buffer. This basically removes **EX\_NREQLOGFILE** field from buffer, if present.

## Chapter 3

# RETURN VALUE

On success, **tplogdelbufreqfile()** return zero; on error, -1 is returned, with **tperrno** set to indicate the error.

## Chapter 4

# ERRORS

Note that **tpstrerror()** returns generic error message plus custom message with debug info from last function call.

**TPENOENT** Field not present or failed to remove from UBF.

**TPEINVAL** Not UBF buffer or buffer NULL.
