Chapter 1

SYNOPSIS

libexjlds.so libexjlds.dylib

Chapter 2

DESCRIPTION

Library is used by binaries which are linked/compiled by **exjld(8)** linker tool. Basically the **exjld** generates the code which includes the class and resources in indexed arrays and **main()** function of the binary calls the functions from this **libexjlds** library to start the JVM. Prior startup, the environment is prepared, **CLASSPATH** is parsed and configured to jvm instance. Library includes also compiled bytecodes which are used as class loaders during the run-time. **libexjlds** helps to resolve compiled classes and resources and load them in the JVM instance.
