

```
14 261587000 1
15 264011791 15
```

Last one is RQADDR, but all others shall be removed after the sreload of server, like this, after full restart:

```
SLOT SERVICE NAME NSRV FLAGS CSRVS TCLST CMAX CNODES
```

```
-----
18210 EXBENCH 15 1 0 0 0 0000000000000000000000000000000000
```

```
RES NO IDENTIFIER SERVERS
```

```
-----
0 265584654 15
```

Seems issue only persist if sreload is performed, for full binary restart, service looks like after the fresh start.
