Release notes

Added `-o <stderr_file>` option for the XATMI servers. This indicates the file name where to redirect the server's `stdout` stream. By default, if the flag is not set, old logic takes place, where `stdout` was redirected to `stderr` stream (i.e. `-e` setting or parent `stderr` output). `ubb2ex` Tuxedo migration tool has been updated to support this flag.

Available from Enduro/X release 8.0.8+.
