Category:	Estimated time: 0.00 hour
Target version:	
Description Overall sanity scan intervals might be imprecise, and at times longer than configured/expected. Mostly this affects SystemV (Unix poller), but some of the time drift affects epoll (Linux mode), and other pollers too.

Release notes

Increased the accuracy of the ndrxd process sanity scan scheduler. Now sanity checks makes more regular scans, according to the setting `<endurox>/<appconfig>/<sanity>`. Still some drifting is possible (i.e. the schedule to next cycle does not include time of the sanity check by it self), but previously much larger gaps between scans were possible.

Available from Enduro/X release 8.0.8+.

#2 - 08/19/2023 01:49 PM - Madars

- Status changed from New to Resolved
